

HOW TO USE THE Mix & Match Scratch Cards

These cards can be used to help you make your game or story.

- > Choose the cards that show the code for what you want your Sprite to do.
- > Place the cards that show you the code you need in a line.
- > Click on the sprite you want to do these actions and copy the code you see on the cards.

> TIPS <

- > Use the colour coding to help you find the code you need.
- > The cards show examples of how you might want to start that code with blocks from the Yellow Events, but you can choose to start your code differently.
- > Test your code to see if it works. If it doesn't work the way you want it to, check the order of the code. Play and experiment with your code until you get it to work the way you want.
- > For cards that need you to create a Variable (Orange code pieces), this means that you need to make a block for something that can change, like a Score. Once you have given that Orange variable a name, you can use it in your code by dragging it in just like you do the other code blocks.
- > Most importantly, have fun making your game and keep testing and trying to make your game and story ideas happen!
